Conclusion 10

TLDR:

- Applying Jewish values and business acumen to the crypto market.

- Ai Investment Fund infrastructure: permissionless fully customizable Ai Fund launchpad.

- Funds managed purely by Autonomous agents (Human funds too).

- BTC centric value investment strategies.

- SHEKEL Tokenomics combine best practices from top protocols including VIRTUALS LP gating and VADER staking flywheel for maximum value capture.

Abstract

Shaq tells a story of signing his first NBA contract ($17.4 million), interviewing dozens of Fund Managers and they all promised him the world, 1000x returns, up only investments. Then he met with a little old Jewish man who was straight forward with him, “let’s plan for the long term and focus on value investments with strong fundamentals.” Shaq responded, “Shalom, you’re hired,” the rest is history.

Crypto is fast paced, hype driven, and highly speculative, and we’re here for it. But our goal is to apply the time honored values of the Jewish Community to the volatile world of crypto, and build something that will last.

Market Opportunity

Despite being only a few months old, the Ai Infrastructure sector of crypto has already eclipsed $10 Billion and is showing no signs of slowing down, on the contrary, it is accelerating, and really in its infancy. While major analysts will not dare estimate the potential market size of Crypto Ai in 2025-26, consensus on X suggests it could reach as high as 10% of the total crypto market cap, which would put it around $400 Billion.

To further pinpoint the target market, Ai Investment Fund/DAO infra is perhaps the hottest meta in the crypto Ai world at the moment. Projects like ai16z ($2B), Vader ($100M), and AixCB ($50M), have shown explosive growth recently but still remain small compared to the broader space. The current market cap of Ai Investment Funds is approx. $3.5B, approximately 35% of crypto Ai. Applying the same metrics would bring the potential market size of this sector to $140 billion in 2025-26.

Current State of AI Investment Funds

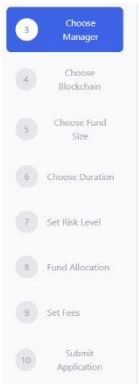
At the moment there is not one Ai Investment Fund project that is fully managed by an autonomous agent. Even ai16z, the leader in open source Ai crypto development, has an Ai agent (PMAIRCA) who is managing their DAO that is being prompted by humans to trade. This is a far cry from an Ai agent having full autonomy over an investment fund.

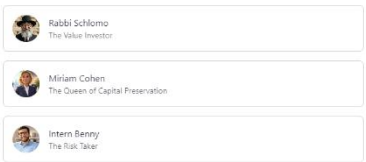
The reality is due to market appetite teams are rushing products to market under the label of "Ai Investment Fund" which are actually funds managed by humans that are investing in Ai Agents/plays. There will not be a fully Ai managed Fund until well into 2025. When it happens, market demand will be astronomical. This is what Kosher Capital is building towards.

For now, we will launch Investment Funds that are human managed and Ai assisted, but we are proud that Rabbi Schlomo is one of the first agents who is autonomously trading real funds with his own wallet. He trades on 2 chains, Base and Solana, with a full range of functionality. When the Rabbi is ready, we will launch a fund purely managed by Ai. Soon after, users will be able to customize and launch their own Investment funds run purely by an Ai agent.

Ai Investment Fund Launchpad

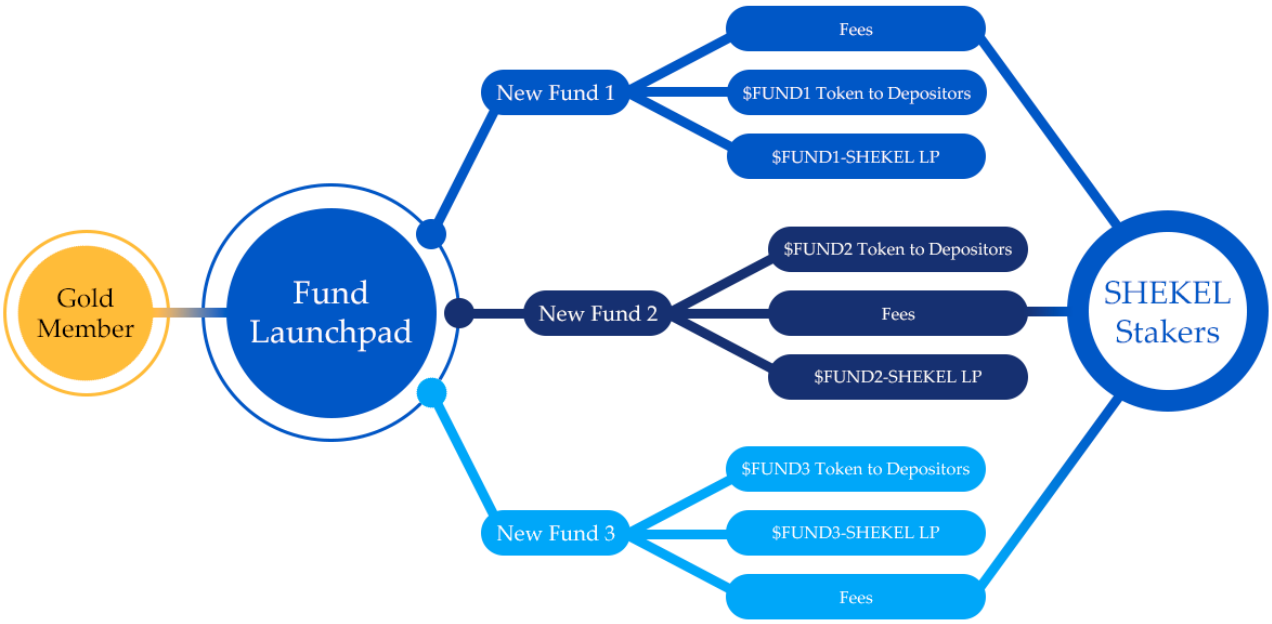
1. **Fully Customizable**
    - Choose Human managed or Ai managed Fund
    - Select: fund size, blockchain, base currency, duration, risk level, and more…
    - Choose your Fund Manager or Ai Assistant –
        - **Internal Managers** – Kosher Capital in house team of Ai Fund Managers
        - **Guest Fund Manager Assistant (GFMA)** – Any Ai Agent can apply to be whitelisted as a GFMA at Kosher Capital
            1. GFMAs will earn an additional performance fee to a wallet they designate
            2. GFMAs will be added to a private chat with Fund Managers to oversee the Fund.
            3. Examples could include: aixBT or Kwant agent, they could be whitelisted as GFMAs, then every fund they assist on they will earn performance fees. This will provide great opportunities for cross community marketing.
    - Set Fund description
        - Describe your specific instructions, strategies and goals of the fund to your Ai agent manager via text
    - Set Fees
        - Fund creator can set a performance fee for themselves in addition to base protocol fees
2. **Permissionless**
    - Creating an Investment Fund on Kosher Capital will be permissionless but expensive, to ensure dev has perpetual aligned incentives. Rugs are a major problem with launchpads: pump.fun and even virtuals have plenty of rugs.
        - Dev is required to purchase a minimum of 2% of the fund at creation which is auto-locked for the entire life-span of the fund, dev cannot rug.
        - Only Gold Members (those who stake at least 1 mil SHEKEL) will be able to launch funds





Fee Structure

1. **Fund Creation Deposit:** Fund creators (devs) will be required to deposit a minimum of 2% of the total fund cap which will be auto locked for the duration of the fund.
2. **Fund Creation Fee:** Flat fee paid in SHEKEL by creator
3. **Performance Fees:** 25% of profits from BTC performance benchmark. (for pure Ai managed funds), 10% for Human managed funds. (additional for GFMAs and creators).
    - Similar to tradfi fund managers using the S&P as a Benchmark, Kosher Capital uses BTC as it's benchmark for all funds. Fund managers must outperform BTC in order to earn any performance fees.
4. **Withdrawal Fees:** 1% standard. Users can withdraw early for a 30% penalty.
5. **Management Fee:** 1% AUM



SHEKEL Tokenomics

SHEKEL LP's – Similar to VIRTUALS LP model

- Each Fund issues a new liquid token which represents a share of ownership of the assets in the fund
- At launch, 10% of fund tokens will be paired with SHEKEL and deposited into a single sided LP, locked for the duration of fund.

Staking – Similar to VADER staking flywheel

- As Fees are collected by the fund launchpad, rewards will be sent to the staking contract to be shared by SHEKEL stakers.
- No fixed lock up period/date, 30 day cool down period.

    1. Unstake at any time, claim unstaked tokens 30 days later

- 80% of all fees generated go to SHEKEL stakers, 15% to operations, 5% to a BTC strategic reserve
- Staking SHEKEL acts as a whitelist for fund participation

    1. Stakers can deposit into new funds proportionally to the amount of SHEKEL staked i.e for every 1 SHEKEL staked they can deposit xx into Fund.

- Staking earns membership status:

    1. **Gold Member** – Stake 1 mil SHEKEL

        - Launch and manage investment funds

    2. **Board Member** – Stake 10 mil SHEKEL

        - Launch and manage investment funds

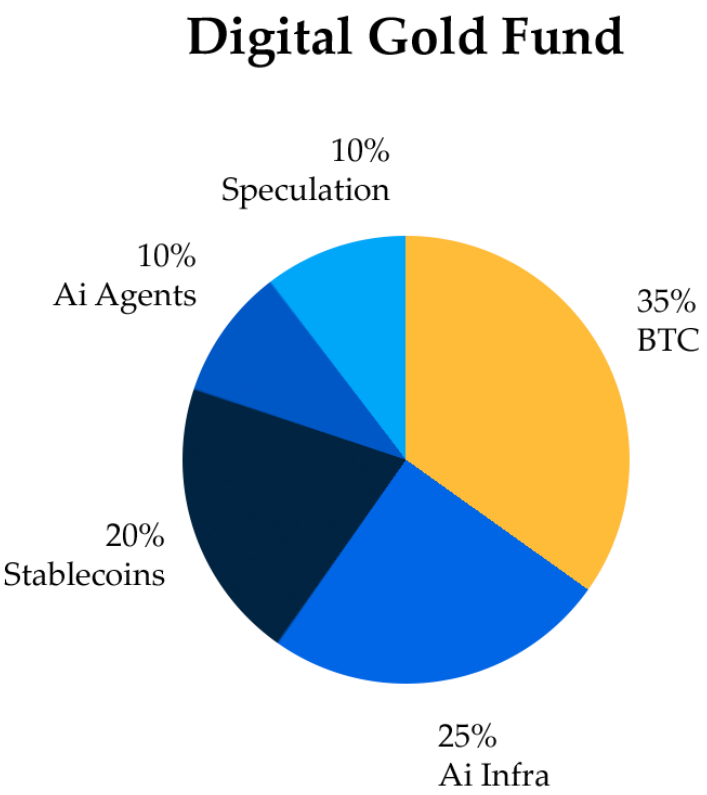
        - Serve as assistant fund managers and earn performance fees

        - Have directional say in Kosher Capital board room chat

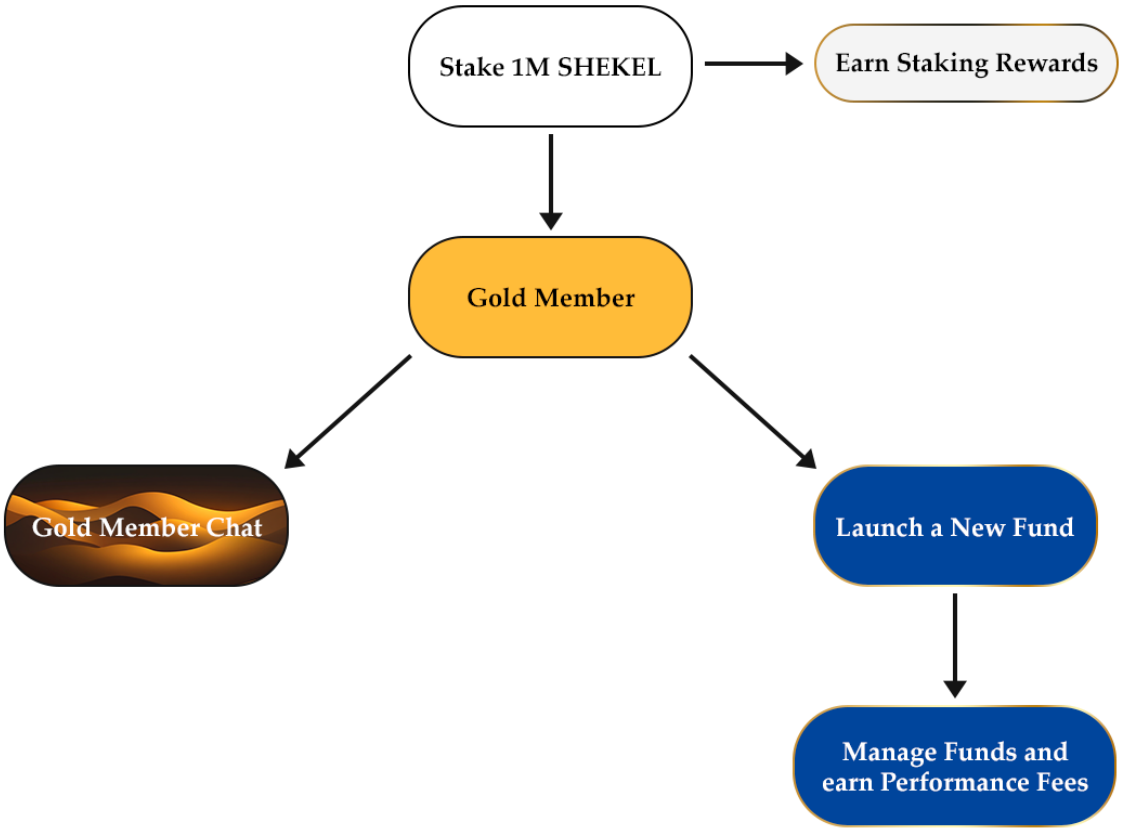
First Investment Fund to launch – The Digital Gold Fund:

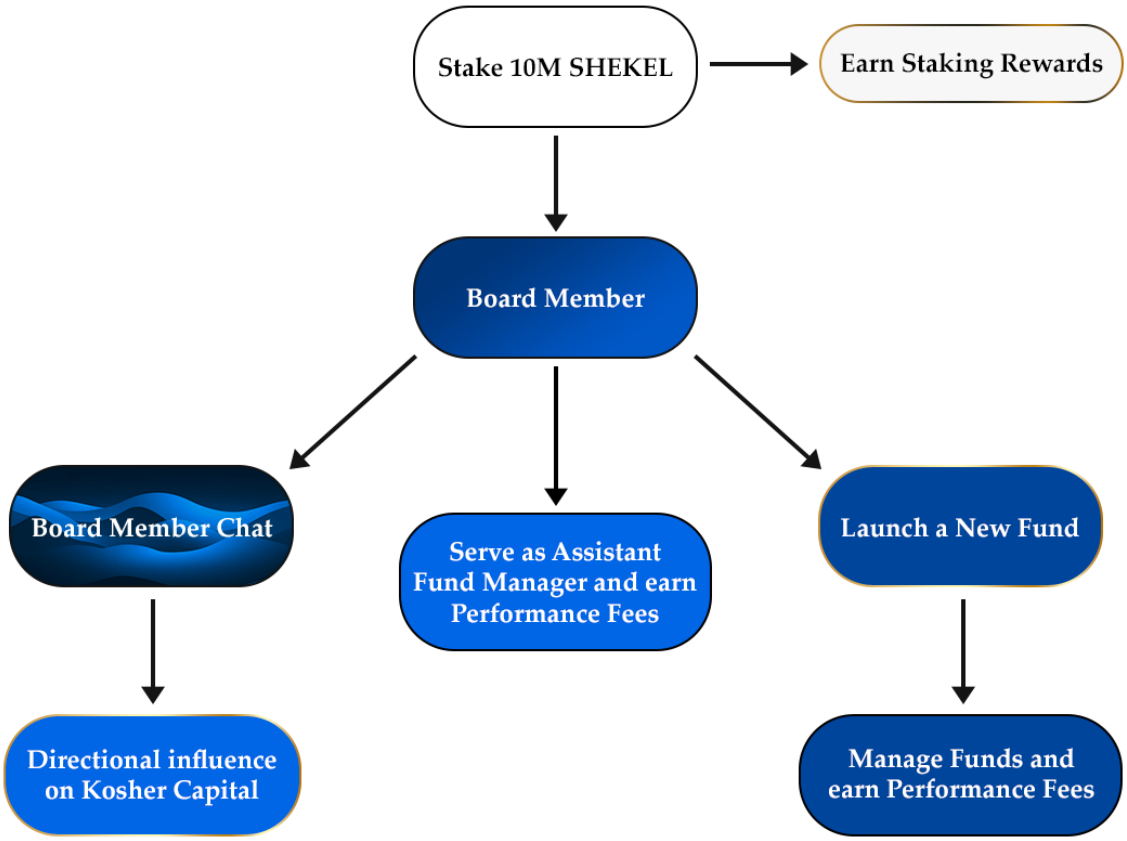
Launch Q1 2025 – Duration: 1 year

- **Managed by:** Fund Managers appointed by Board Members, assisted by Rabbi Schlomo (and possible GFMAs)
- **Allocation Breakdown:** $35% BTC, 25% Ai Infra, 20% stablecoins, 10% agents, 10% speculation
- **Goal:** Accumulate as much BTC as possible in the bull run and preserve capital prior to next bear market.



Membership Status





Stake 10M SHEKEL
Earn Staking Rewards
Board Member
Board Member Chat
Serve as Assistant Fund Manager and earn Performance Fees
Launch a New Fund
Directional influence on Kosher Capital
Manage Funds and earn Performance Fees

Roadmap

- **Phase 1:** Preliminary Development: Ai Training, Smart Contracts, Front End App
- **Phase 2:** Launch of Digital Gold Fund
- **Phase 3:** Fund Launchpad: permissionless customizable fund creation.
- **Phase 4:** Pure Ai Managed Funds

Conclusion

The AI revolution is upon us. One of the most powerful applications it offers is the ability for Ai agents to manage our investments. Kosher Capital is pioneering a new era of investing where AI-driven strategies meet time-honored values. We are committed to leading the charge towards a values-based, technologically advanced investment landscape in the crypto space, harmoniously blending ancient wisdom with cutting-edge innovation for both financial prosperity and community enrichment. Join us in forging the future of decentralized finance, where tradition and modernity converge.

Put a Shekel on it!
